**DETAILED ACTION*****Election/Restrictions***

Applicant's election with traverse of group I comprising claims 1 – 13 in the reply filed on 11/6/2006 is acknowledged. The traversal is on the ground(s) that both of the inventions are not independent and distinct and that there would be no serious burden placed on the Examiner during examination. This is not found persuasive because, as indicated in the restriction requirement mailed 10/4/2006, the inventions are indeed independent and distinct and have been classified accordingly. Furthermore, the primary classification of claimed subject matter is merely one indication of the burdensome nature of the search requirements and a serious burden on the Examiner may also be shown by appropriate explanation of the field of search (see MPEP § 803). The restriction requirement merely refers to the primary classification for the inventions, not the complete scope of the prior art search in additional art class and subclass classifications that would be required in determining patentability. Clearly, since the different claim sets comprising each of the inventions comprise different features, different searches and patentability determination issues are involved in the examination of each invention. The requirement is deemed proper and is therefore made FINAL. Claims 14 – 70 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1743

Claims 1 – 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 – 13 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are:

Regarding claim 1, it is unclear as to how the containment portion in combination with the substrate encloses a fluidic channel and the positioning of the cross-linked polymer regions with respect to the fluidic channel. Does the fluidic channel contain the polymer material as well? In claims drawn to an apparatus statutory class of invention, the structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device (See MPEP § 2172.01). Furthermore, a feature that is taught as critical in the specification should be recited in the claims (see MPEP § 2164.08c).
